

# Homework, Week 8, part A

December 20, 2013

Go to <http://www.graphviz.org/Download.php>, download graphviz, and install it on your machine.

After installation, look at your directory structure (using your Windows explorer or whatever tool you use) to see how graphviz is installed. My directory looks like this: `c:\Program Files (x86)\Graphviz2.34`. Look at the `bin` directory and you will see a number of executable programs. We will be working with `dot.exe`, `neato.exe`, and `circo.exe`. You are welcome to experiment with any others you want to, but we will only be using these three.

Now, look at the `share` directory. Mine is at `Graphviz2.34\share\graphviz\doc\pdf`. Below is a screenshot of my machine. Read ‘dotguide.pdf’ and, if you have the time and energy, at least look at the first page of ‘dot1.pdf.’ You may also want to browse some of the other PDFs that look interesting to you.

Your biggest challenge may be getting these commands to work. Tomorrow, I will discuss this and give you three options.
